Abstract:

Background and purpose: Hakim Najib al-Din Samarqandi is one of the Iranian scholars of the Thirteenth century AD. He was a physician, pharmacologist, ophthalmologist, and psychologist. The purpose of this study is to study his life and medical works.

Methods and Materials: This Research was carried out by a library and historical research methodology. We examined the life and medical works of Najib al-Din Samarqandi.

Conclusion: Due to Najib al-Din's knowledge about medical, pharmacological, ophthalmological and psychological topics, it can be concluded that he has mastered all his sciences in a way that his skills and innovations reflected in many of the medical works by scholars, scientists and physicians after him.

Keywords: Hakim Najib al-Din Samarqandi, Khwarazmian Dynasty, Scientific Works
